

ZAMBIA UNIVERSITY COLLEGE OF TECHNOLOGY

FULL-STACK FINAL COURSE PROJECT

Technologies: React.js, Express.js, PostgreSQL

Submission Deadline: 29 May 2026

Introduction

Technology continues to play an important role in solving real-world problems within institutions and communities. This assignment is designed to encourage students to think creatively and develop practical software solutions using modern full-stack web technologies.

Students are required to identify a real problem within the university environment and develop a working web application that attempts to solve or improve that problem.

Assignment Task

Develop a full-stack web application that solves a real problem identified within the university environment.

The system must be developed using the following technologies:

- **React.js** — Frontend Development
- **Express.js** — Backend Development
- **PostgreSQL** — Database Management

Students are encouraged to focus on creativity, innovation, usability, and problem-solving.

Minimum Requirements

The developed system must demonstrate the following concepts:

- User Authentication and Login
- CRUD Operations (Create, Read, Update, Delete)
- Database Integration using PostgreSQL
- API Development using Express.js
- File Upload Functionality
- Responsive Frontend using React.js

Suggested Project Areas

Students may develop systems related to:

- Classroom Management
- Maintenance Reporting
- Hostel Management
- Lost and Found Systems
- Event Management
- Lab Booking Systems

Students are free to propose their own ideas.

Deliverable

Students must submit a **fully functional working system** that demonstrates the concepts covered in class and solves a real problem.

Students will also be required to present and demonstrate their systems.
